

**Your Support Requested**  
**for Orgonomic Science and Research**  
from James DeMeo, PhD, Director of OBRL  
*(To skip the research overview, scroll down to page 16)*

Dear OBRL Friends, Subscribers and Supporters,

My introduction to, and early work in orgonomy began around 1970, and I founded the non-profit Orgone Biophysical Research Laboratory (OBRL) eight years later, while working as a graduate student at the University of Kansas (KU). This decision was prompted from an awareness that the intense controversy surrounding my research – investigating Wilhelm Reich's findings in an open scientific manner – would require non-traditional funding. In this letter, I will ask you to support my research with a financial donation, or by purchasing my books. But allow me to flesh out the reasons why you, as someone with a positive interest in the life and works of Wilhelm Reich, are asked to do so. Some who are getting this funding request already know my 45 years of work in orgonomy, but many more will not, so I am taking extra time to give an historical overview of my accomplishments in scientific orgonomy.

The OBRL Greensprings Center, 2016, Ashland, Oregon  
Laboratory, Seminar Room, Offices, Observatory

## Early Work in the Universities

In the 1970s and 80s, after earning a BS degree in Environmental Science, and later as a graduate student and Instructor at the University of Kansas (KU), department of Geography and studying Earth and Atmospheric Science, I was awarded the first-ever Master's and PhD degrees for investigating and systematically testing Reich's findings. Those were milestone studies. The first study verified the efficacy of Reich's cloudbuster device in a series of field trials. It was shown that the weather over the full State of Kansas responded towards increased cloud cover and rains within a few hours after the cloudbuster was put into use. A separate study of the cloudbuster's effects on isolated cumulus clouds was undertaken, also with positive results in keeping with Reich's observations. That work created quite a stir among the faculty, and the skeptics did their best to obliterate it – they were not successful.

<http://www.amazon.com//dp/096218554X>

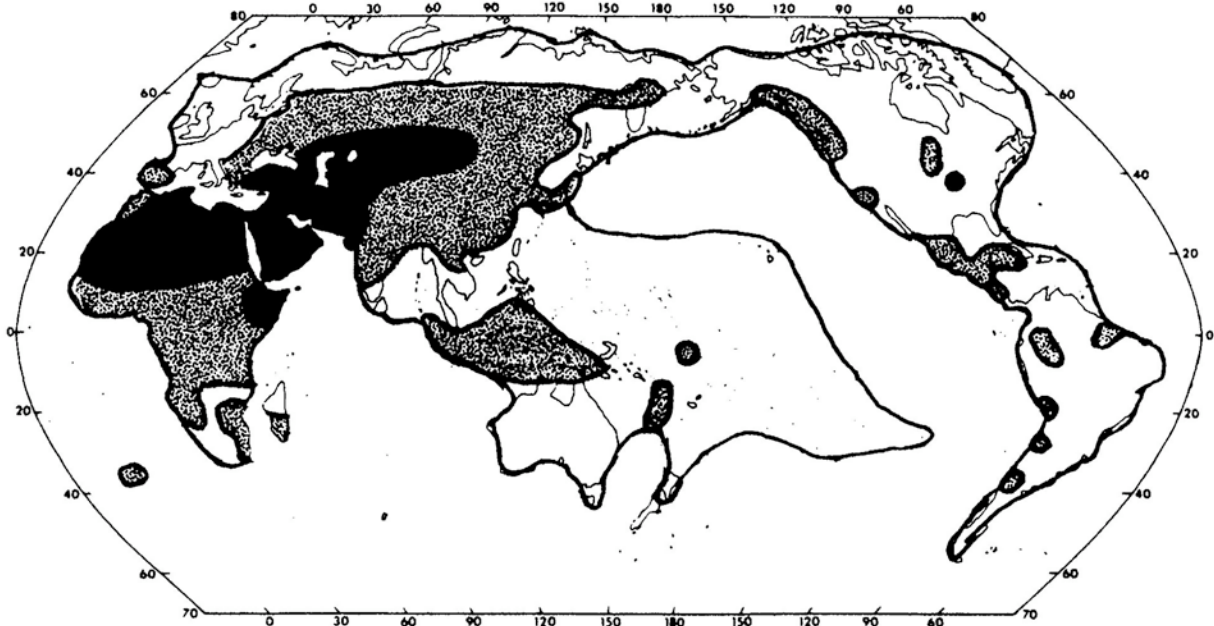

Cloudbuster Icarus, used in DeMeo's Drought-Abatement Experiments

My second study at KU, for the PhD, subjected Reich's *sex-economic theory on human irrationalism and the origins of violence*, to a systematic global cross-cultural evaluation. That study on *Sahasia*, as it came to be known, used a combined geographical, cross-cultural / time-line method I pioneered, to peel back layers of history, and understand how the dual problems of human emotional armoring and violence had begun and spread widely across the planet. My Sahasia work was also the first ever global geographical mapping of the standard anthropological/ethnographic data, and also the largest global cross-cultural study

ever undertaken on human family life and the origins-of-violence question. Sixty-three behavior variables within 1170 different cultures were correlated, mapped, and historically analyzed against long-term climate changes. My work was the first to document a large and severe correlated desert-spreading epoch at c.4000-3500 BC, the most extreme climate change to have occurred since the end of the Pleistocene Ice Age, and which created what I identified as the *Saharasia Desert Belt*. This was documented in my work well before modern concerns about postulated climate-changes of a far lesser magnitude. My historical reconstruction also confirmed *an early garden-like period of prehistorical peaceful conditions*, before Saharasia dried up, giving substance to widespread cross-cultural myths.

My Saharasia findings solved the *riddle of the origins of armoring* question posed by Reich, as well as the parallel question burning across all the social sciences, on the *origins of violence* within that same famine-struck region.

DeMeo's *World Behavior Map*, identifying the Old World region of Saharasia hyperarid deserts as the formative and persisting region of the most heavily-armored people, and greatest social violence (black regions). <https://www.amazon.com/dp/0980231647>

Only in recent years do we find paleoclimatology, anthropology, archaeology and history confirming my findings, firstly published in 1986 as a Doctoral Dissertation, and later as a book. My Saharasia work also identified the *past and present* world of Islamic culture as socially dangerous, the most violent culture-type in modern times, with disastrous consequences for any region into which they

migrate or invade. My work of 30 years ago anticipated the violence that is today unfortunately observed in the recent Islamic migration-invasion into Europe. This correlation of findings made Saharasia very "politically incorrect", but nevertheless *accurate in all its major findings and predictions*. It is the largest global cross cultural study to have ever been undertaken, by anyone or any group, and it provides a solid proof of accuracy for Reich's clinical and sex-economic findings. <http://www.saharasia.org>

In those two studies, on the cloudbuster and Saharasia, I had breached many academic barriers, challenged the widespread falsehoods of Reich as a "crackpot", and elevated his work to prominence within several academic disciplines – even if recognition of this fact was, and remains, slow in coming.

### **A Decade as Instructor and Professor**

Over 10 years I served as professor in the universities – starting as occasional Instructor at KU, later as Assistant Professor at Illinois State University, University of Miami, and finally at the University of Northern Iowa. I was the "popular controversial professor" to whose classes students were attracted, and included Reich into my courses where appropriate. My courses often drew over 100 students, even while some faculty members grumbled sarcastically about Reich, "that sex stuff", or "cloudblasting". My research into Reich's findings throughout that period was always undertaken in an open manner. I never beat a drum about it, but neither did I hide anything. In this openness to public investigation of Reich's findings, and willingness to publicly correct and refute the many critics who objected Reich, and to my findings, I was nearly alone. Eventually, growing controversy led me to pursue an independent path. My OBRL was, up to that time, a very low-key thing, hardly growing beyond an idea.

### **Associations with Orgonomic Groups**

Before my work in the universities, I had undertaken research in my private home laboratory in Florida, building orgone accumulators, running pilot-study experiments and investigating bioelectrical phenomenon with millivoltmeters. In this, I was guided by Robert Morris, one of the early Elsworth Baker orgonomists. For a time, because of research results and adherence to scientific methods and honest investigation of Reich, I was welcomed by several of the orgonomic therapy associations. I spent a month as lab assistant at the Elsworth Baker Research Lab in Ottsville, Pennsylvania, where I met and worked with Richard Blasband and Courtney Baker, two of the most prominent orgone biophysicists of that time. The *Journal of Orgonomy*, produced by the American College of Orgonomy (ACO),

published my early research, in total 23 different articles on orgone biophysics, cloudbusting and Saharasia. In 1987, I was acknowledged with a Research Affiliate award by the ACO. I was also invited to become a founding member of the Institute for Orgonomic Science (IOS). However, I retained my independence, and while making friendships and working relationships with professional members in those organizations, as well as within mainstream scientific and scholarly societies, I continued to organize my research through my own private institute, the Orgone Biophysical Research Lab (OBRL).

## Laboratory Research

I continued with laboratory research throughout my university years. By 1989, I moved to the San Francisco Bay region of California, to develop my work exclusively through OBRL. In 1994 a suitable property was found in the forested mountains near Ashland, Oregon, where a high-altitude research laboratory and educational center was developed. The Ashland region was selected for its forested and exceptionally good orgonotic conditions, where powerful accumulators could be constructed without “turning sour” with oranur, which sometimes can be the case in dor-laden regions or sections of big city environments. A new research laboratory and seminar building was constructed, eventually to include a rooftop astronomical observatory, Orgone Energy Darkroom (the first on the West Coast), and student cabin. New multiple orgone energy accumulators were constructed for the experiments underway, and much progress was made, cutting into new territory.

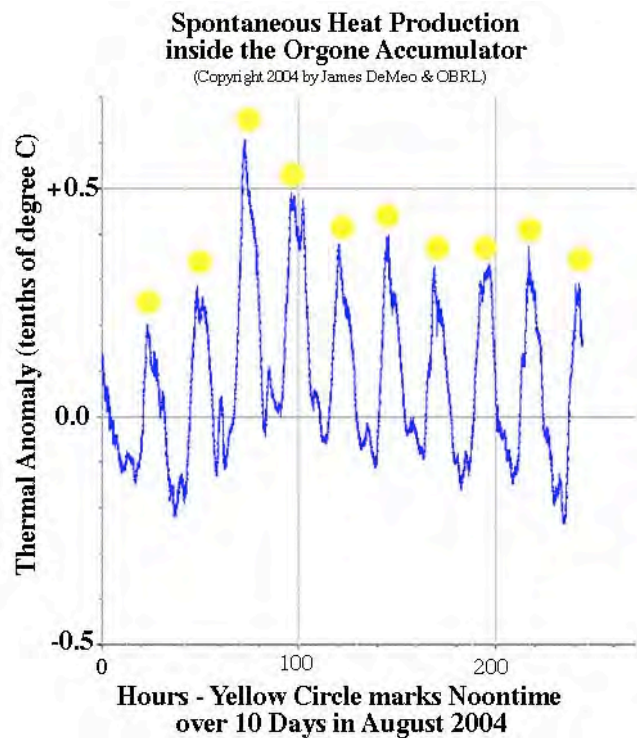

In that exceptional natural environment, replication studies on Reich's *bions* were undertaken, as were controlled experiments evaluating various aspects of the orgone energy accumulator.

Blue-glowing bions in a quartz-sand preparation. Leitz Microscope, 2000x  
<https://www.youtube.com/watch?v=-PVnS72IIY8>

Over the years, I was able to confirm Reich's major experimental findings at OBRL, in very tight experimental protocols using the best equipment available. These experimental verifications included a multi-year controlled replication study on the To-T “spontaneous” heat-production in the orgone accumulator, a three-year controlled replication study on the boosting of seed sprout growth in the orgone accumulator, and various confirmations of Reich’s findings on the slowing of electroscopical discharge rates inside the accumulator. This work also included bioelectrical and environmental electric-field investigations which both Reich and Harold Burr had independently undertaken.

<https://www.amazon.com/dp/0980231655/>

The *Orgone Energy Darkroom* allowed for making the first photograph since Reich's time of a blue-glowing VACOR tube, in my case excited only by the human hand, without electricity being applied. I also verified Reich's findings on orgone-charged Geiger-Muller tubes, obtaining several thousand counts from the ambient background, when the uncharged tubes yielded only around 20 counts.

Pulses from an Orgone-Charged Neutron Counter (blue) over 10 days, versus from an Uncharged Counter (red) as presented in 2011 to an international *Conference on the Physics, Chemistry and Biology of Water*.

I also made new controlled-experimental findings on the suppression of water evaporation inside the orgone accumulator, and orgone charging effects upon water surface tension, conductivity and other parameters. Rainwater and snow-melt samples were at one time monitored over a year, for radioactive isotopes from the melt-down of the Fukushima reactors in Japan.

I later discovered a unique spectrographic signature in orgone-charged water, in the ultra-violet (UV) frequencies, a line of research that continues today. More discussion is given on this towards the end of this letter.

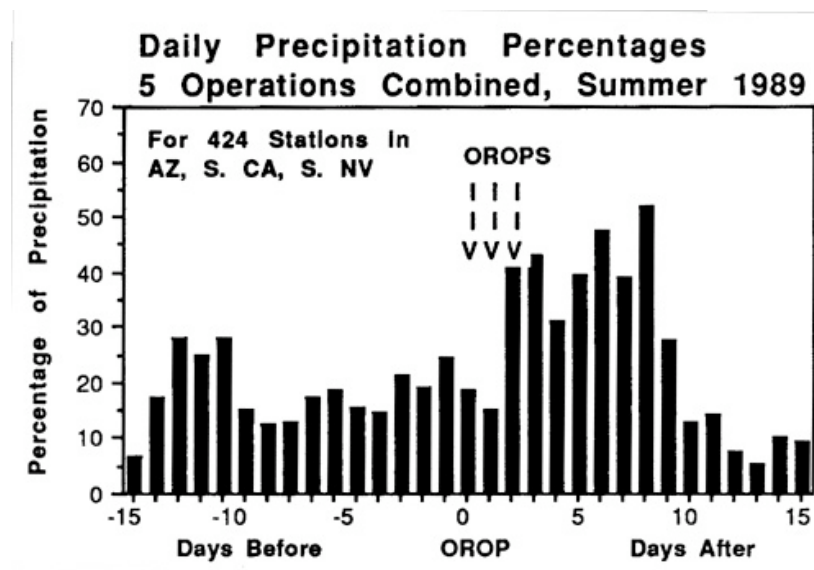

DeMeo's study on UV absorbance in orgone-charged water, as presented in 2011 and 2014, to an international *Conference on the Physics, Chemistry and Biology of Water*.

The OBRL facility in Oregon and the new analytical equipment purchased throughout the 1990s and early 2000s allowed for high quality and significant experimental investigations. My work not only confirmed Reich's earlier findings, but frequently did so with new additional findings. Newer laboratory equipment and data-recording methods were used, not available in Reich's time, providing even better documentation on cosmic life-energy. My findings verifying Reich became known to forward-thinking scientists outside of orgonomy, and were published in a few mainstream science journals, supplemented with additional articles by myself and other orgonomic researchers in the OBRL journal, *Pulse of the Planet*. Lectures on my findings were also presented to academic scholarly societies, where I generally found a surprisingly good reception to Reich's and my work, in spite of the widespread "skeptical" slandering that seemed to never end. A year-end *OBRL Newsletter* was also initiated, presenting an annual summary of my work. The *Newsletters* have been distributed freely for over 20 years, and can still be downloaded and reviewed. <http://www.orgonelab.org/OBRLnewsletter.htm> Back-issues of the printed OBRL journal *Pulse of the Planet*, also remain available: <http://www.orgonelab.org/cart/xpulse.htm>

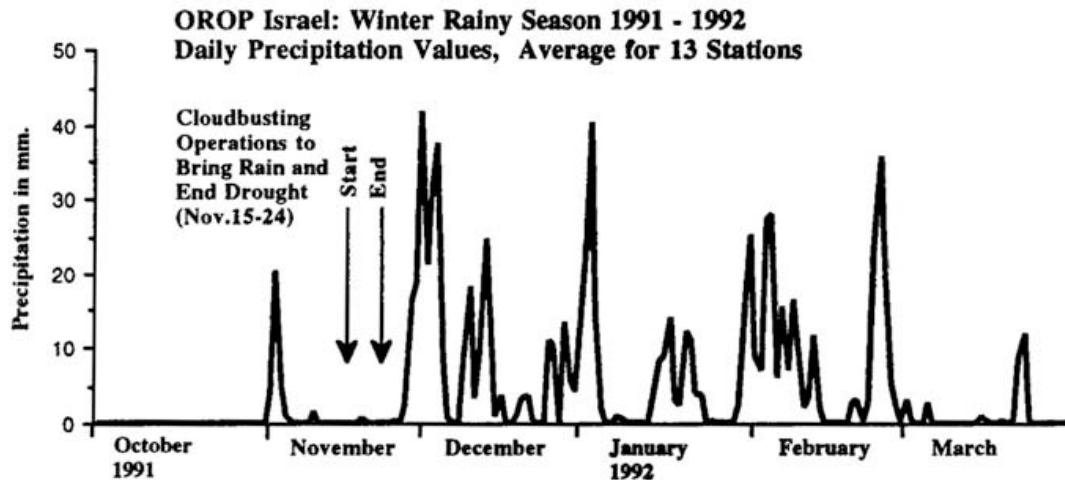

## Ending Droughts and Greening Deserts with the Reich Cloudbuster

In addition to the laboratory research, where possible I undertook field applications of the Reich cloudbuster in the USA and overseas. Critical drought situations persisting over years or decades were ended, often spectacularly. My cloudbuster research, which began with the original confirming study at KU in 1979, continued with drought-breaking work in the SE USA (1986). A major systematic study was undertaken in the harsh dry zone of Arizona (1989) on five pre-announced dates, producing a *rainfall-doubling* effect. Other applications ended California droughts, including the unforecasted “surprise” foggy rains that extinguished the historic Oakland Hills firestorm (1991) and the unforecasted “surprise snowstorm” that ended the Yellowstone National Park firestorm of 1988. Both of those extreme events were ended by cloudbuster work, as organized by myself with support from experienced volunteers. I also led teams of workers in drought-breaking projects in Israel (1990) and Namibia (1991-92) with official invitations and logistical support from those two governments. The Israel operations ended a 3-year period of historical drought with record-breaking rains and snow, filling all reservoirs to overflowing. Likewise with the Namibia cloudbusting operations that ended a 12-year prolonged dry period, with an acute severe drought over the prior 3 years.

Results of DeMeo's Arizona 1989 cloudbusting operations, average of five separate tests showing a “rainfall doubling” effect.

The last of my international projects was a major *5-year drought-abatement project* undertaken by invitation from the Ministry of Agriculture of the State of Eritrea, in East Africa (1994-1999), at the edge of the Sahara Desert. That work began during a multi-decade epoch of drought. Nevertheless, the very first expedition brought significant rainfalls, abruptly ending that drought. Over subsequent years of work, an amazing transformation of the regional landscape occurred, from terrible drought and barrenness with starvation held back only by significant costly food imports, into a greened, more garden-like situation with bumper crops and economic recovery. The Eritrea project brought exceptional good rains and attendant blessings across the Horn of Africa and nearby Sudan and Ethiopia. This was especially so in 1998, when three cloudbusters were employed in coordination to bring copious rains, in spite of El Niño conditions that forecasters ominously predicted would bring a strong return to drought across the region. Subsequent runoff water flow into rivers and reservoirs of the region was also exceptional, with flows that travelled down tributaries into the Nile River, to eventually *fill Lake Nasser*, behind the Aswan High Dam, for the first time since its completion in 1964. Excess overflow waters were significant, and channeled out into the open Sahara Desert, to the Northwest of Aswan, where *five new gigantic lakes appeared*. Nothing like this had been seen in living memory, nor recorded by history since prehistorical times, before the Sahara dried up 6000 years ago. A few of those lakes persist today, and can still be seen on Google Earth images under the heading "Toshka Lakes".

*This was a powerful confirmation of Reich's original discovery.*

Controversy and "skeptic club" attacks followed every step of this important work, however, and basically led to a blackout censoring of any public media mention or scientific awareness or discussion on that breakthrough work. I nevertheless have no doubt that recognition will come to our team of volunteers, and to Reich, in a future time. This amazing result was published in our *Pulse* journal, and I have given lecture presentations on it with exceptional photo documentation. <https://www.amazon.com/dp/0980231655/>

Over the 1990s, I led and directed 14 separate cloudbusting expeditions into Africa and Israel, in each case the work was undertaken by teams of sincere and

dedicated volunteer scientists and scholars, and assisted greatly by local government water experts, climate scientists and volunteers in each of the host nations. Nobody got personally paid for it, and whatever money came in went to the significant expenses, with rare excess funds plowed back into the OBRL research fund. During this same period, I was invited to lecture on orgonomy by a Berlin Reich group, establishing a *waldheilung* (forest-healing) effort that worked towards ending their severe air-pollution crisis. Similar invited lectures were given to the Hellenic Orgonomic Association in Greece, helping them with an ongoing drought problem – again supported by local volunteers. Those efforts were all rewarding, but physically taxing. After 2001, with the events of the 9/11 Islamic terror attacks making travel into the large Saharasian Desert region of Islam doubly hazardous, I halted the overseas cloudbusting work. My weather work was then restricted to the USA only, in California and Oregon, working with the USA CORE Network of skilled operators. The worst aspects of drought in Pacific NW regions, mostly north of San Francisco into Southwestern Canada, were either held at bay or reversed by those efforts, often with spectacular results. For example, here's a report from early 2016: <https://obrlnews.wordpress.com/2016/03/30/core-network-success-miracle-march-ii-west-coast-rains-snow-preliminary-report/>

The current late December 2016 rainy epoch in Southern California also was preceded by CORE Net work, intensifying a weak system into a potentially drought-breaking pattern. This work continues, unfunded and in a low-key manner, so long as the West Coast drought continues. However, my fundraising efforts over many years has made the following very clear: *Given the non-stop slander machinery of the "skeptical groups" and their allies in the mainstream media, traditional methods of funding for orgonomic research is nearly impossible.*

Today, with this letter, I seek financial support for my laboratory research and educational efforts, specifically through OBRL, a point I will get to momentarily.

## **Publications, Lectures, Seminars**

Public education and outreach through OBRL has continued as a major enterprise. Through OBRL, a new journal *Pulse of the Planet* with an irregular schedule was established in 1989, with five issues released so far. These issues of *Pulse* contain numerous articles by different independent scholars and scientists working across the field of orgonomy. My own books have also been published, also mostly after 1989. Here I will list them:

\* *The Orgone Accumulator Handbook*, now in multiple languages, in a new updated edition of 250+ pages.

\* *Saharasia: The 4000 BCE Origins of Child Abuse, Sex-Repression, Warfare and Social Violence, In the Deserts of the Old World*, now in a second updated edition, with new appendix article.

\* *Heretic's Notebook*, and *On Wilhelm Reich and Orgonomy*, book versions of the last two editions of our *Pulse of the Planet* journal, for which I was Editor.

\* *In Defense of Wilhelm Reich: Opposing the 80-Years' War of Mainstream Defamatory Slander Against One of the 20th Century's Most Brilliant Physicians and Natural Scientists*, written in response to an onslaught of mainstream media slander against Reich that began in 2011.

\* *Marx Engels Lenin Trotsky: Genocide Quotes*, written to educate about the horrific genocidal sentiments, and actions, of all the founding tyrants of Communism.

\* *Preliminary Analysis of Changes in Kansas Weather Coincidental to Experimental Operations with a Reich Cloudbuster*, republishing my original 1979 study at the University of Kansas.

My own small press also published the works of other authors, such as:

\* James Martin's updated edition of *Wilhelm Reich and the Cold War*

\* Emanuel di Pasquale's *Natural Love, and the Unnatural Attacks Against*

\* Roberto Maglione's *Healing of Atmospheres*.

While privately published, *all these works stay true to Reich and his orgonomic science*, and continue to be available. <http://www.naturalenergyworks.net>

For the future, I am presently working on a new book about the *Ether-Drift Experiments*, which like Reich's work, were never defeated experimentally, but only politically attacked and undermined. In this new work, available in 2017, the argument is made that Reich's orgone energy is functionally identical to a cosmic ether, filling all space. However, Reich's definitions have expanded our knowledge about the cosmic ether, in that it has pulsatory and streaming properties, and has biologically-active and water-reactive properties, much like a "cosmic protoplasm". Reich once called the cosmic ether of space *a good theory which had been prematurely discarded*, and how right he was! Other preliminary titles still in progress are:

\* *Saharasia Since 1900*, which updates the original Saharasia findings through 20th and 21st Century history and current events.

\* *James DeMeo, Research Anthology and Compendium*, of research papers.

\* *A New Atmospheric Science of Life Energy*, discussing desert formation processes, and cloudbusting methods and problems, in theory and practice.

Time and equipment funds permitting, a DVD will be produced from my video archives on the cloudbusting work, and another on the orgone biophysical experiments, and a third on the Saharasia findings. A first step in this direction has been made in preserving older documentary video materials, from original VHS, Hi8 and Digital8 tapes onto hard-disk storage. But these projects must wait until funding and time is available to allow for video editing and processing. Meanwhile, a YouTube channel has been developed which holds a few items produced from my lectures and other work.

<https://www.youtube.com/user/naturalenergyworks/videos>

My video on *Wilhelm Reich and the Orgone Energy*, viewable through the above weblink, today has nearly 500,000 views.

I am still occasionally invited to lecture or hold seminars at universities, and expect that this will continue, funds permitting for travel and other expenses. A list of the institutions that hosted my lectures in the past is given here:

<http://www.orgonelab.org/powerpoint.htm>

Over most of the 1990s, OBRL also hosted annual seminars at the high-altitude facility in Oregon, on the subject of Reich and Orgonomy. These include seminars on *Bions*, *The Reich Blood Test and Cancer Biopathy*, on *Children of the Future*, on *The Orgone Accumulator*, and my regular private *Independent Study* seminars for students. We continue to host occasional seminars at OBRL, but a bit less frequently, every other year. For 2017, a summer seminar will be offered at OBRL, with a separate one-day seminar in Germany:

<http://www.orgonelab.org/events.htm>

My personal publications also include various articles in mainstream scientific journals, including peer-reviewed ones, aside from those in the orgonomy journals; plus several invited full chapter contributions to books published by university presses. Full lists of my publications, offering free PDF downloads, are found at these websites (to gain access to the first two of these links you must register with them):

<https://orgonelab.academia.edu/JamesDeMeo>

[https://www.researchgate.net/profile/James\\_DeMeo/contributions](https://www.researchgate.net/profile/James_DeMeo/contributions)

<http://www.orgonelab.org/demeopubs.htm>

This public availability of my published materials is somewhat unique in orgonomy, and has stimulated a greater and more serious interest in Reich and orgonomy. My research website orgonelab.org today has nearly 3 million recorded visitors, and I've posted up some of my articles, book-previews and a few lecture

presentations at the big ResearchGate.net and Academia.edu websites. There, to my delightful surprise, *tens of thousands* of graduate students, professors, research scientists and independent scholars have downloaded my various articles and lecture PDFs. Through those offerings, scholars, scientists and professionals world-wide have learned the facts about Reich and orgonomy, and about my verification studies. *These studies are otherwise systematically censored and deleted by "skeptics" from websites they control, such as Wikipedia, and other deceptive "fact check" websites operated by "skeptic" liars.* My work has thereby at least partially overcome the mainstream roadblocks, and served to correct the many published slanders and omissions which Reich's name and work, and orgonomy in general, have been subjected to. My *Saharasia* work is today also incorporated into a few university courses, as a textbook.

Consequently, overall I am greatly pleased at this opening of doors for my work, and for the professional reconsiderations of Reich and orgonomic facts and truths that my work has stimulated.

### **The OBRL Library and Archive**

Starting in the 1970s I began gathering the necessary books for study and research into the issues of Reich's work, and related subjects. My personal library is now at nearly 500 linear feet of shelving, which includes all of Reich's published materials, including the "banned and burned" materials, and a great deal more obtained from various archives of his associates. Included are research volumes across many disciplines, and the major works of modern innovators and "heretics" in the fields of medicine, biology, chemistry, physics and astronomy.

OBRL also since became an Archive of its own, not only to hold my own significant research papers and video materials, but also donated papers, documents, books and video collections from Eva Reich, Charles Kelley, James Martin, Robert McCullough, Digne Marcovicz and others. There also is a significant archive of material in the OBRL Library on the 19th and 20th Century ether-drift experiments, gathered from my independent research on the subject. I've published several papers on successful ether-drift experiments by others, including an internet site presenting new materials that will be incorporated into, and expanded upon in my forthcoming new book on the subject.

<http://www.orgonelab.org/miller.htm>

Professional equipment for video editing and transfer to hard-disk storage, in multiple formats, also resides at the OBRL facility, now gearing up for public presentations of accumulated materials.

## The New Research Needing Your Support

Thanks to a great deal of openness and help from others, my research productivity has not lagged throughout this long adventure, which began in 1970 when I firstly read Wilhelm Reich's *Selected Writings*. I could not put it down. *I had to know, was Reich correct? Was this fantastic view into a new and alive future for humanity something real and solid?* And so, I launched out towards answering that question. I am pleased to once again report, as I've done many times in the past, the answer to that question is a resounding *Yes!*

More can be done, however, if proper funding can be obtained. The needs can be broken down into two categories:

*1. Funds for Public Outreach and Education.* Funds are needed for production of new DVD releases, as described above. For this, a new video editing computer with software is needed, as is a new pro-HD digital video camera, to document ongoing experimental work and seminars at OBRL. I wish to organize several new educational YouTube videos, including historical videos from lectures held at OBRL seminars over the years, and from the original videotapes made by Digne Marcovicz for the *Viva Little Man* video production years ago, and which were entrusted to me and OBRL for safekeeping and use. Conference lectures are also extremely important in the scientific world, out of which often come new allies, openings, and invitations to publish. But even invitations to speak at conferences require funds for travel expenses and other fees. Hosting of our seminars is also not cheap. For seminars, we now rent a lecture hall at a nearby university, but need to construct a secondary open-air amphitheater for our summertime outdoor conferences and lectures, under the trees. This requires pouring of a concrete pad with roof shelter, and other amenities.

*2. Funds for Our Current Laboratory Research Directions.* Laboratory research dominates my focus, currently with investigations in several new directions.

Firstly are the open questions related to orgone-charged water, investigated through optical spectroscopy. This new work has already provided additional proofs for the orgone accumulator as a working apparatus of highly unusual energy-yielding capacities. I have already demonstrated how *orgone-charged water yields unusual new properties sufficient to inhibit the transmission of far-UV ultraviolet frequencies, but also to fluoresce in the near-UV and blue frequencies when sufficiently excited.* With variations in material composition of the orgone accumulator, I also discovered a means by which orgone water could acquire a significant electrical charge, without any frictional or "water drop" methods. This

is reminiscent in how the orgone energy can, under anomalous circumstances, charge up other materials with an electrostatic charge, by means other than frictional charge separation. A similar property has been discovered in fresh rainwater and snowmelt at the OBRL facility over the last several winters. Intensive blue-glowing snow, observed in shadows and snow-holes, yielded these spectrographic signatures, while frozen distilled water or fields of rather dead-looking greyish snow did not.

These new findings have put strong experimental proofs to Reich's observations on what he termed *orgonotic lumination*, as in the blueness of natural spring and lake waters. I hope to test these findings in other directions as well, as with blue glacier ice and meltwaters, and as seen in certain flowers that literally glow in the dark blue and UV, as a means to attract bees for pollination. The whole question of "luminating blueness" and "bioelectricity" has been thereby unified conceptually as a kind of orgone-charged "glowing water electricity", which offers new insights into both bioelectricity and thunderstorm lightning.

This new research has opened up new avenues to explore, and new questions about the relationships between orgone energy, the *life-energy*, and the deep blue and UV frequencies, a phenomenon occasionally observed in "structured" or "activated" states of water as investigated by various forward-thinking water researchers. Besides Reich, the works of Viktor Schauburger, Giorgio Piccardi, and Gerald Pollack come to mind. I've already given several invited lectures on this new work to the *Conference on the Physics, Chemistry and Biology of Water*, with two published papers in their *Water* journal (see the publications websites given above).

New investigations must be undertaken, to repeat the original findings, and acquire new water samples from natural hot springs, healing waters, and blue-glowing glacial ice, to see if they also yield similar spectrographic signatures. If so, it provides additional proofs for the accuracy of Reich's claims about blue-glowing orgone energy charge as a biologically-active, and weather-active phenomenon.

In this same direction, the goal of objective photographic recordings of glowing orgone energy phenomenon is opened up by new instrumentation, notably in the Generation 3 night-vision devices. These image intensification devices allow exceedingly dark environments to be greatly amplified, where typically dim subjective light phenomenon can be both seen and recorded on video. In Summer of 2015, we briefly had a Generation 3 intensifier available to make such observations, and were literally blown away by what it revealed. One could see what appeared to be orgone units ("random photons") track across the Gen.3 pixel screen, and other phenomenon needing to be documented. These devices are

expensive, however, and without additional funding, it will remain an unexplored avenue.

For now, I will simply state the fact that these new lines of research can only proceed with additional funding. We have set up a fund for purchase of new materials and apparatus, and to cover other expenses related to public education, new video productions, and similar. But as of today, our limited funds available cannot be used for that “wish list”. We have sufficient funds to pay the heat and electricity, the OBRL facility is already bought and paid for, but at present, without additional funds, the new efforts won’t be undertaken with the vigor they deserve. These new lines of research will be multi-year efforts, as I see it today. They have already borne fruits, but new funding must be obtained to flesh out the findings.

I will close with an appeal to you, the reader and supporter of Wilhelm Reich's research legacy, to review my work as related above, along with the weblinks that give documentation to what I write, and consider making a generous donation to OBRL. I believe it is not immodest to say, there are few research programs underway around the world that have such a clear and uncompromising dedication to, and focus upon Reich's original sex-economy and orgone biophysical research. And fewer still with such a solid record of experimental verifications and applications of Reich's discoveries.

OBRL, the Orgone Biophysical Research Laboratory, Inc., is an IRS-approved non-profit foundation, and all donations to it are tax-deductible. Your support is both necessary and critical, for continuance of my efforts, going directly towards the research program. Please consider to donate now, as you are able, or to purchase my books as a means towards supporting my work. See here:

OBRL Donation Page (using PayPal, but they also accept your credit card)  
<http://www.orgonelab.org/donations.htm>

You can also donate by check made out to the “Orgone Biophysical Research Lab” or "OBRL" and mailed to:  
Dr. James DeMeo, PO Box 1148, Ashland, Oregon 97520 USA.

Please also consider to remember OBRL in your Testament. If you wish to personally discuss our needs and goals, please contact me by email to OBRL:  
**donations@orgonelab.org**

For those of lesser means, a purchase of books also is helpful in keeping my work moving forward, and now is a good time if you have been delaying to get them. See the left-side column, here: <http://www.naturalenergyworks.net>

Thank you for your support.

***We wish you all the very best, for a Merry Christmas, Happy Hanukkah, Happy Holidays and Merry Solstice celebrations, and for a thriving and productive New Year 2017.***

James DeMeo, PhD
